

# SCHULE Pellet Hardness Tester

For Pellets, Crumbles, and Other Shaped Products

SCHULE Pellet Hardness Tester

Dimensions:  
height: 330 mm  
width: 400 mm  
depth: 285 mm

The SCHULE pellet hardness tester is appropriate for testing the hardness of pellets and other crumbles. So a simple quality control can be realized during the production process already and the determined values can be used without delay for optimization of the pelleting plant.

The instrument can be used for pellets and crumbles of different diameters.

- Measuring range up to 1000 [N]
- Digital display
- PC interface
- Automatic return of the pressure piston after measurement
- Automatic averaging neglecting the highest and the lowest measurement
